Moss Pole

- Stabilizing your Moss Pole **WITHOUT** spike can be done in 2 ways.
 - Simply secure your Moss Pole in place with the aid of a stake and secure with ties (both sold separately)
 - Or, place your Moss Pole into a pot and fill Moss Pole with potting medium. The height of the potting medium within the Moss Pole should be level with the potting medium in the pot.
- Stabilizing your Moss Pole **WITH** spike. Simply attach spike to moss pole and insert into pot

- Your Moss Pole can then be filled with your medium of choice, such as Sphagnum Moss, Hydro Clay Pebbles and / or Coco Peat.
- At the very beginning use wire to attached vines to Moss Pole. As the plant grows they will naturally attach but may need assistance from time to time
- Moss Poles can be easily extended as your plant grows. Additional Moss Poles simply connect to the one beneath
